Your description of this error is confusing. You say that the 'Update Column' screen does not contain anywhere to specify the 'task\_id' for the 'bio\_sketch\_file' field, yet your extract from 'staff.dict.inc' clearly shows that 'task\_id' has the value 'div\_staff\_biosketch(filepicker)'. How did you enter this value?

In the 'Update Column' screen the 'task\_id' field is available on any column which is a string with a size not greater than 255.

Can you send me an export of your dictionary data for me to test on my PC?
