Great stuff apart from some minor issues:

- (4) The only entries requied in the inlude path are for:
  - radicore/includes (or wherever you may have moved it)
  - radicore/menu
  - radicore/audit
  - radicore/workflow

(7) and (8) are easier to achieve if you have phpMyAdmin installed, or even MySQL Query Browser. Nobody but a geek runs anything from the command line.
