Attempting to run EXPORT TABLES with apache and mysql both running on a Linux server, I got the following error messages:

Cannot open file /projects/website//radicore//classes/cylinder.class.inc

Cannot open file /projects/website//radicore//classes/cylinder.dict.inc

Cannot open file /projects/website//radicore//classes/cylinder_fitted_to_door side.class.inc

Cannot open file /projects/website//radicore//classes/cylinder_fitted_to_door side.dict.inc

Note the double slash round the radicore subdirectory.

I suspect it is to do with linux not having disk letters "C:\", but how can that explain two sets of double slashes?
