Subject: Re: Delete2 deletes the wrong records... where's my error?
Posted by ikatz on Mon, 31 Dec 2007 17:50:08 GMT

ok. i'm pretty sure that i have the inner/outer table stuff done correctly, because my add3, popup, and multi2 work as expected. please disregard my previous statements about the a_id changing instead of b_id. after some more exploration, it turns out that both ids were filled with junk values; getting 2 of the same b_id was sheer coincidence.

so, the best description i can give of the problem (as i now understand it) is that my delete2 is deleting the correct number of records, but not necessarily the records that i have selected. its sort of like delete2 is picking the records to be deleted out of a different (larger) recordset than the one being displayed by multi2.

what would make that happen? (also, if there are other questions i should be asking myself, or other information i should be posting to be more helpful then please let me know)
