Subject: Re: Delete2 deletes the wrong records... where's my error?

You will need to step through with your debugger to see what records are being selected when the MULTI2 screen is populated, then check that when you select a record for deletion the primary key of that record is being extracted correctly before being passed to the DELETE2 transaction.

There is a MULTI2 transaction in the MENU system which you can test (see http://www.tonymarston.net/php-mysql/menuguide/mnu_nav_butto n(multi2).html), and if this works correctly then there is nothing wrong with the logic within the Radicore code.
