File include.general.inc contains the following code:

```
$include_path = ini_get('include_path');  
$include_path .= PATH_SEPARATOR . '../menu';  
$include_path .= PATH_SEPARATOR . '../audit';  
$include_path .= PATH_SEPARATOR . '../workflow';  
ini_set('include_path', $include_path);
```

Here PATH_SEPARATOR is a constant which varies between *nix and Windows systems.

You did not amend this code by any chance, did you?
