Yes, the password fields are encrypted on MNU_USER. Just, one row I added is not encrypted

On MNU_CONTROL:

I updated field_value to 'N' and I could log on. Is that correct or you can give me any suggestion about that record?

```
-----  
record_id = SYSTEM  
field_id = PSWD_ENCRYPT  
field_value = Y  
-----
```

cheers
