Hi Tony,

I tried with code which you suggest me, but I could not pick up data from table.
This is code which I implement:

```
function _cm_initialiseFileUpload ($where, $fieldarray)
// perform any initialisation before displaying the File Upload screen.
   {
   // ******* new code
   $fieldarray = $this->_cm_getForeignData($fieldarray);
   // ******
      $this->upload_subdir = $fieldarray['path']; // **** new
      $this->upload_filetypes   = 'text/plain';

      $this->upload_maxfilesize = 1000000;
   return $fieldarray;
```

This part of code :

```
 $fieldarray = $this->_cm_getForeignData($fieldarray);
```

works when I put in other _cm ... functions. Also I tried with global variable and found very
interesting thing that data from global variable is not possible transfer from _cm .. function, to _cm
functions, but when I put global variable in first function (function table_name()) I could read
content of global variable inside _cm_initialiseFileUpload function.
