Subject: Help with internationalisation please Posted by bonzo\_bcn on Tue, 15 Jul 2008 14:29:19 GMT View Forum Message <> Reply to Message

I was trying to translate my application to another language but I don't seem to do it right:

I exported the subsystem. This created a file called 'subsystem'.menu\_export.txt in the text folder.

I copied the content to text/en/language\_text.inc translating the titles to the right.

So now when I open the subsystem I should see all the translated labels in all the screens, right?

EDIT: I found in the tutorial that all the screen files have to be copied and translated.

So if I have to translate all the screen files, where are the 'column details for subsystem'defined in the language\_text.inc file used?
