Subject: Re: Return from help screens Posted by gpatti on Wed, 13 May 2009 17:48:22 GMT View Forum Message <> Reply to Message

session_start() is populating \$_SESSION but I don't know how to tell whether it is the correct data or not.

The redirect to the logon screen is occurring due to the if statement at line 978: if (basename(\$PHP_SELF) == 'help.php' OR is_True(\$GLOBALS['batch'])) { this causes \$script_id to be set to \$logon_screen at line 996.

I'm not familiar with basename. What does this do?
