I have the same problem with version 1.74, using debug I can see at line 96

```
if (count($_SESSION) <= 1) {  
    // if $_SESSION is empty then $_POST must be empty as well  
    $_POST = array();  
} // if
```

The \$\_SESSION array is empty and the \$\_POST array has 4 elements

user\_id: mgr

user\_password: password

submit: LOGIN

session\_name: menu0

At this time the \$\_POST array is cleaned and the login data is lost, when comment line 98 the framework works!!
