Looking further into my problem, I suspect the following causes the parent fields not displaying :

In the xm the data has following xml structure :

```
<user>
  userfields
    <input_week>
      input_week fields
        <input/> (corerct since table empty)
    </input_week>
</user>
```

The user table is part of another subsystem, havin a differnet database. The structure xml part shows :

```
<structure>
  <outer id="aasa_user.user">
    --> data
  </outer>
  <middle id="input_week">
    --> data
  </middle>
  <inner id="input">
    --> data
  </input>
</structure>
```

just checked the scripts, and I only used the short table name 'user', Somewhere during the processing, the datyabase is prepended to the table name.

Start looking for it right now

Johan
