For a list1 screen, and possibly others, setting \$sql_orderby_seq='desc' has no effect - the order is still asc. A workaround is adding desc to the end of the \$sql_orderby, as in \$sql_orderby='location desc' to sort by the location field in descending order.

It may be best to remove \$sql_orderby_seq completely, and let the sequence be defined in \$sql_orderby, as that appears to be the way the existing code works.
