Hi Tony,

I have created a popUp Task which shows me the entries of a lookup table and inserts the PKey-Fields (user\_id, user\_seq\_no) in the child table.

Now I want to get additional field values (user\_name, user\_firstname) from the parent table for also inserting in the child table. The \$select\_array contains only the pkey values.

How can I get these additional values best?

Best regards,

Juergen
