
Subject: overruling primary validation time fieldtype

Hi,

I want to be able to enter a time value > 24 hours.
During insert/update, this will generate an error "Invalid HOURS", because the
std.datevalidation.class only allows hours <= 24.

It seems this 'primary validating rule' cannot be skipped/overruled.

What is the best and/or proper way to achieve this, without making any modification to the
framework code.

Thanks
