I also ran into a situation where I have a compound UNIQUE key (some_timestamp, some_type_id), and both fields are NOT NULL.
I wanted some_timestamp to get the value now()::timestamp(0) with time zone.
(This truncates the milliseconds from the timestamp which I don't want because I want only one record of this type per second.
But it seems the framework will test the UNIQUENESS and fail since now() is not a real value yet.
