Thank you for your patience. I think I do now understand what you mean and how you handle it.

I went through the code with my debugger and wanted to know if the following is true:

1. the output3.php controller file is called

2. the report.inc file is called.

```
.....  
$structure['multi3']['fields'][1][] = array('field' => 'multi_03','width' => 180,'x' => 15);  
.....
```

3. my output3_pdf_subclass.inc is called where I have to generate the \$outarray for the multiN record.

```
case 'multi3':  
$row['multi_03'] = 'foobar';  
$outarray[] = $row;  
break;
```

But what I still not understand and what was the origin of this post is, how can I generate a multiN record as a horizontal line and is there a possibility to show images in the multiN records?

The easiest way for the report which I would like to create would be the option 'ignore_if_empty' in the multiN zone and the possibility to show 'images' instead of 'fields'.

Please think of it that I haven't that much experience in programming like you have but I am very motivated to learn it and to implement it with RADICORE.
