I have added your fix to the getCount() method within std.table.class.inc as follows:

```
// ****
function getCount ($where=null)
// get count of records that satisfy selection criteria in $where.
{
    if (strlen(trim(preg_replace("/^\s+/u", "", $where))) > 0) {
        $count = $this->_dml_getCount($where);
        return $count;
    } else {
        return 0;
    } // if
} // getCount
```
