
Subject: different results in queries

Was trying to call `mysql_query`, `mysql_fetch_array` in `_cm_post_updateRecord`

Can this be done? Seems like calling those does not give me any results or error messages.

I went back to mysql functions because radicare does not give me the correct results. Attached is a script to implement Van Tulder's Tree <http://www.sitepoint.com/print/hierarchical-data-database>.

One version is using radicare and the other using his script.

Test data:

| role_id | role_id_snr | lft | rgt |
|----------|-------------|-----|-----|
| GLOBAL | NULL | 1 | 10 |
| TESTING | GLOBAL | 2 | 9 |
| TESTING2 | TESTING | 3 | 8 |
| TESTING3 | TESTING2 | 4 | 7 |
| TESTING4 | TESTING3 | 5 | 6 |

Test Scenerio (Reparent TESTING2 to GLOBAL)

| role_id | role_id_snr | lft | rgt |
|----------|-------------|-----|-----|
| GLOBAL | NULL | 1 | 10 |
| TESTING | GLOBAL | 2 | 3 |
| TESTING2 | TESTING | 4 | 9 |
| TESTING3 | TESTING2 | 5 | 8 |
| TESTING4 | TESTING3 | 6 | 7 |
