Yep, I did that.

```
// get all children of this node
$this->sql_select    = 'role_id';
$this->sql_from      = 'mnu_role';
$where = "role_id_snr='".$role_id.'"";
$children_rowdata = $this->_dml_getData($where);
```

Assuming if two rows were returned.

"TESTING"

"TESTING2"

I refer to array returned explicitly

`$children_rowdata[0]['role_id']` //value is "TESTING"

`$children_rowdata[1]['role_id']` //value is "" should be "TESTING2" correct?

Im new to php, is this the correct way to refer to a 2nd row?
