Thank you Mr Tony, it's very useful information ..!

but You have said in the installation:

12.To run the application please point your browser to <http://localhost/radicore/index.html> and use one of the 'logon' hyperlinks. When the logon screen appears you can use the following:

User = MGR

Pswd = password (case sensitive)

it's OK, But what is the password?

Referred to the database, I found that all passwords are encoded (menu_user table)

I could only log in with one account demo/demo

I think It's a limited account

what should I do?
