Subject: Re: load radicore on apache Posted by ahoussam on Sat, 06 May 2017 00:20:38 GMT View Forum Message <> Reply to Message

Thank you Mr Tony, it's very useful information ..! but You have said in the installation: 12.To run the application please point your browser to http://localhost/radicore/index.html and use one of the 'logon' hyperlinks. When the logon screen appears you can use the following: User = MGR Pswd = password (case sensitive)

it's OK, But what is the password? Referred to the database, I found that all passwords are encoded (menu\_user table) I could only log in with one account demo/demo I think It's a limited account what should I do?
