Subject: Re: Radicore installation problem Posted by AJM on Wed, 07 Jun 2006 13:14:17 GMT View Forum Message <> Reply to Message

You need to load the extensions for DOM and XSL, as documented in http://www.radicore.org/radicore-for-php.php. Different extensions are required for PHP 4 and PHP 5.

On a Windows PC it is as simple as commenting out the ';' at the beginning of the relevant line in the extensions section. On other machines you will have to rebuild PHP with the correct configure commands. Please check the PHP documentation for details.
