
Subject: BUG. \$wherearray is empty in _cm_Fileupload

Hallo,

I was trying to give an uploaded image a name which contains the product ID of the product where it belongs to.

I couldn't get the product_ID from the \$whereArray in _cm_Fileupload. I've discovered that the \$where information gets lost because the _cm_InitialiseFileupload function doesn't give back a \$fieldarray.

I solved the problem by adding return \$fieldarray at the end of _cm_InitialiseFileupload.
