Hi Tony,

1.) is there a possibility to show images in the body section of a list view (output2 pattern)? In the title section I have no problems to generate this by using:

$structure['title'][] = array('image' => '%%vereine_logo',
      'imagewidth' => 40,
      'imageheight' => 40,
      'y_relative' => 1);

But this doesn't work in the body section.

2.) is there a possibility to underline the 'labels' in the body section? Such as i.e.
$style['body']['labels'] = array('border' => '1'); in the pdf.styles.inc?

Best regards,

Juergen
