Hello,

Even after reading the aforementioned FAQ, and setting all values in config.inc, I still experience some problems...

The errorlog shows:

Fatal Error: MySQL: Access denied for user 'Peter'@'%' to database 'k1593_audit' (# 1044)
Error in line 113 of file '____/radicore/includes/dml.mysql.class.inc'.

Please note the bold text, since that should be (according to config.inc):

```
$servers[0]['switch_dbnames'] = array('audit' => 'single'
```

In MySQL, the database k1593_single does exist..

Probably just missing something, plze assist...
