There is a line of code in the TCPDF library like this:
$chars = TCPDF_STATIC::pregSplit('//','u', $str, -1, PREG_SPLIT_NO_EMPTY);
which is returning a boolean instead of an array. I don't know why it is doing this, so I have added
the following 3 lines after it:

```
   if (!is_array($chars)) {    // *** AJM 07/05/2024
      $chars = array();      // *** AJM 07/05/2024
   } // if                   // *** AJM 07/05/2024
```

The amended script is in the attached zip file. Try it and see if it fixes your problem.
