I did some debugging, and the `_cm_getPkeyNames` method inside my inner entity in the multi4 is never called.

For extra details, I wrote out the contents of the various attributes in the custom methods, and none contain the `sel_publish_key` other than the `_cm_changeConfig` methods `$fieldarray` after I add it.

When looking at my code above for the inner entity, is that not the correct way of adding the `sel_publish_key` to the inner? and is my `_cm_getPkeyNames` method not correct? (I did change the attribute name from `$pkey` to `$pkey_array`)

Thanks,

Dan
