In the tutorials you have demonstrated of validation of data is done.

In radicore how do you process business rules before a screen is displayed (ie. enquire, add, delete and etc...).

Some examples:

1. If an invoice is posted, set checkbox to readonly on list screen  
or
2. If an invoice is posted, set some fields in the detail screen to read only.
3. Color a the row of record red if overdue in list screen

Do you have an example?

If you want to do some processing after a record has been retrieved but before it is displayed then you can use the `_cm_post_getData()` method.

If you want to change a field to read-only then refer to  
<http://www.tonymarston.net/php-mysql/infrastructure-faq.html#faq10>

If you want to change the colour of a field then refer to  
<http://www.tonymarston.net/php-mysql/infrastructure-faq.html#faq73>. To do this for a whole row you must apply it to every field in that row.
