All component log folders are like radicore/*/sql/logs except for workflow which is radicore/workflow/sql/log - singular. Is this by design?

List of empty folders as of release 2017-04-02:

logs
audit/sql/logs
classroom/sql/logs
default/classes/custom-processing
default/reports/custom-processing
default/screens/custom-processing
default/sql/logs
default/sql/mysql
default/sql/oracle
default/sql/postgresql
default/sql/sqlsrv
default/text/custom-processing
dict/sql/logs
includes/tcpdf/cache
menu/sql/logs
product/sql/logs
survey/sql/logs
workflow/sql/log
xample/files/upload
xample/sql/logs
xample/videos

They are supposed to be empty.

The anomaly is in the naming of workflow/sql/log instead of as workflow/sql/logs like all the others.

The list will be useful to generate them if the code was from Github.

I shall change that directory name. I shall not be using GitHub.

The function logSqlQuery() in includes/include.library.inc file in lines 4699-4704 has the path to the logs hardcoded thus:

```
    $script_name = basename($_SERVER['PHP_SELF']);
    if (!is_dir('./sql/logs')) {
        mkdir('./sql/logs');
    } // if
    $fn = "./sql/logs/{$script_name}.{$_SESSION['logon_user_id']}.sql";
  error_log("$string\r\n", 3, $fn);
```

Hence a mere rename of the workflow/sql/log folder to workflow/sql/logs may be sufficient.

That will be fixed in the next release.
