## Subject: https-server not defined - Access denied

Hi Tony, since I uploaded the new tcpdf files I have problems with accessing Radicore on the internet server.

In FireFox I get the following error message:

This application has encountered an unrecoverable error
Please contact your system administrator for details

The error message, generated by Radicore, says that no string value has been designed for the https server.

2020-01-14 11:10:27
Fatal Error: No value has been defined for 'https_server' (# 256)
Error in line 1346 of file '/var/www/vhosts/mgh-saar.de/includes/include.session.inc'.
PHP_SELF: /htmanager/menu/logon.php
CURRENT DIRECTORY: /var/www/vhosts/mgh-saar.de/htmanager.de/htmanager/menu
SERVER_ADDR: 88.128.88.103
SERVER_NAME: www.htmanager.de
HTTP_HOST: www.htmanager.de
REMOTE_ADDR: 88.128.88.103
REQUEST_URI: /htmanager/menu/logon.php?csxslt=off

My ISP says that this would be an php or an application error. Do I have to define a https server? And if yes, where? Or can you tell me where I have to look for a solution?

---

If you installed files from the latest update, version 2.14.0, I accidentally included a copy of my config.inc file which may have overwritten your version. You need to check this file to ensure that it is correct for your server.

That error message is generated in line 1357 of file include.session.inc which says that if the value for $_SERVER['HTTPS'] is true then a value must be supplied for $GLOBALS['https_server']. You need to check the settings in your config.inc file.

I can access the application again when disabling directing http to https in the web hosting configuration. Then I have access via http.
When activating this button and setting $GLOBALS['https_server'] = 'www.htmanager.de' (which has the same name as the http server) I can open the login site. If I want to login I get an error message: redirection error. The request can't be finished.

Do I have to change something else i.e. $GLOBALS['https_server_suffix']?

I changed $GLOBALS['use_https'] from false to true. Now everything is working fine again. Thank you.
