Tony,

Your FAQ 137 looks like you have an application that sends attachments via email. Is this in one of the prototype apps? I'd like to have a look at the code to see how you have done that if it is available.

Thanks,

Graham

I'm afraid that particular email transaction is not available in any of the prototype apps. It is part of a larger commercial package and is therefore not available as open source.

Thanks Tony, I appreciate that.

I don't suppose you could outline the approach you took so that I could code in a similar way?

The button is made to appear in the screen with the following:

$this->fieldspec['add_attachment'] = array('type' => 'string',
                        'control' => 'button',
                        'task_id' => 'py_email_attachment(fileupload)');

The fileupload task has thge following code in the _cm_post_fileUpload() method:

$array['filepath'] = $filename;
$array['filename'] = $this->filename;
$array['filesize'] = $filesize;

This causes those values to be passed back to the calling form where they appear in the _cm_popupReturn() method where I have the following code:

```
if ($return_from == 'py_email_attachment(fileupload)') {
   if (!empty($select_array['add_attachment'])) {
$filename = $select_array['add_attachment']['filename'];
$filepath = $select_array['add_attachment']['filepath'];
$filesize = $select_array['add_attachment']['filesize'];
      $fieldarray['add_attachment'] = null;
      // save these details for the _cm_postInsertRecord() method
      $this->attachments[$filename] = $filepath .' [size='.$filesize.']';
      // rebuild the list of attachments
      $list = '';
      foreach ($this->attachments as $key => $value) {
          $list .= $key .', ';
} // foreach
$fieldarray['attachments'] = rtrim($list, ', ');
   } // if
} // if
```

These values are processed in the _cm_postInsertRecord() method with the following code:

```
if (!empty($this->attachments) AND is_array($this->attachments)) {
   $attachments = $this->attachments;

} elseif (!empty($rowdata['attachments']) AND is_array($rowdata['attachments'])) {
   $attachments = $rowdata['attachments'];
} // if

if (!empty($attachments)) {
   // $attachments has 2 possible formats:
   // 1) associative - 'filename = filepath'
   // 2) indexed - [idx]['filename'] = '....'
   //              [idx]['filesize'] = '....'
   //              [idx]['filebody'] = '....' or [idx]['filepath'] = '....'
   $array1     = $attachments;
   $attachments = array();
   foreach ($array1 as $key => $value) {
      if (is_array($value)) {
         $attachments[] = $value;
      } else {
         // convert from associative to indexed
         $filename = $key;
         $filepath = $value;
         if (preg_match('/(?<=\[size=).*(?=\])/', $filepath, $regs)) {
            $filesize = $regs[0];  // extract file size
            // remove '[size=...]' from the value
```

```php
            $filepath = preg_replace('/\[size=.*\]/', '', $filepath);
        } else {
            $filesize = null;
        } // if
        $attachments[] = array('filename' => $filename,
                               'filepath' => $filepath,
                               'filesize' => $filesize);
        } // if
    } // foreach
} // if

if (!empty($attachments)) {
    // add each attachment to a separate table
    $dbobject =& RDCsingleton::getInstance('email_attachment');
    $dbobject->audit_logging = $this->audit_logging;
    foreach ($attachments as $idx => $filedata) {
        $insert['email_id'] = $rowdata['email_id'];
        $insert['filename'] = $filedata['filename'];
        $insert['filesize'] = $filedata['filesize'];
        if (!empty($filedata['filebody'])) {
            $insert['filebody'] = $filedata['filebody'];
        } else {
            $insert['filepath'] = $filedata['filepath'];
        } // if
        $insert = $dbobject->insertRecord($insert);
        if ($dbobject->errors) {
            $this->errors = array_merge($this->errors, $dbobject->errors);
            return $rowdata;
        } // if
    } // foreach
    unset($dbobject);
} // if
```

I hope this helps.

Many thanks. I will play around with this.
