I have checked the details of your web hosting company http://www.unitedinternet.de and discovered that their hosting services are provided by 1and1 (http://www.1und1.de and http://www.1and1.co.uk). Among their options are, guess what, 2xMySQL databases, 8xMySQL databases or 15xMySQL databases. So if you switch to the relevant option you will be able to have enough databases to run Radicore and whatever application you have developed.
