Your description of this error is confusing. You say that the 'Update Column' screen does not contain anywhere to specify the 'task_id' for the 'bio_sketch_file' field, yet your extract from 'staff.dict.inc' clearly shows that 'task_id' has the value 'div_staff_biosketch(filepicker)'. How did you enter this value?

In the 'Update Column' screen the 'task_id' field is available on any column which is a string with a size not greater than 255.

Can you send me an export of your dictionary data for me to test on my PC?
