This may be a bug but I'm not sure so I'll put it here.

The _cm_post_getData is not getting called sometimes. I think it is only in classes which do not directly inherit from Default_table. i.e., dict_table_s02.

It appears as though getEntryPoint() may be the cause. On line 1053 of std.table.class.inc getEntryPoint() returns null and prevents the call to _cm_post_getData.

This prevents dict_table_s02 from writing my dictionary files when exporting tables to php.

Can you reproduce this problem?

version 1.28.0, php5, mysql5
