After finally getting a debugger to work, it appears to be dying on the first require statement:

```
require 'include.general.inc';
```

Running phpinfo(), my include path is set to:
.;C:\Program Files\Apache Software Foundation\Apache2.2\htdocs\radicore\includes;W:\HTDOCS\INCL UDES

Do I need to set some other include path to pick up this file? Do I need to escape the spaces in the path or something along those lines.
