This version contains the following updates:

modified 'std.data_field.xsl' to allow the option lists for dropdowns and radio groups to have a separate set of values for each row in a MULTI2 or MULTI3 form.
modified 'std.data_field.xsl' so that if a text field contains a non-breaking space it will be output as a non-breaking space in the HTML output. This is because when ' ' is added to the XML document it becomes ' ' which causes the HTML output to display ' ' instead of ' '. The string ' ' is therefore replaced with ' ' during the XSL transformation.
fixed bug in 'extractQualifiedFieldNames()' - used in 'qualifyOrderby()' - which failed to deal with 'CASE ... END AS alias' correctly.
fixed bug in resizeImage() function to use forward slashes instead of back slashes in path names so that it will work on *nix systems.
fixed bug in task wk_workflow(validate) which caused the SQL query to fail by qualifying a column in the ORDER BY clause with the wrong table name.
fixed bug in 'include.sesson.inc', 'include.xml.php4.inc' and 'include.xml.php5.inc' which failed to deal with "$_SERVER['HTTPS']=off" when using IIS.
