The term "unbundle" is a confusing description. I assume that you mean that you want your users to go straight to an application menu instead of always starting at Radicore's main menu. In this case take a look at point 2 of http://www.tonymarston.net/php-mysql/infrastructure-faq.html #faq65.

Basically you create a new role for your users with the relevant permissions, and set the START_TASK of this role to the menu of your choice.
