Hi Tony,

I have in my user table column upload_path, and I have a problem to read this in _cm_initialiseFileUpload function, and put in $this->upload_subdir field.

This is the sequence:

1. LIST1 of my custom table
2. Than select first row, and press read button
3. After that I press Upload button inside Read option

My demand is to pickup value of selected column upload_path and put in $this->upload_subdir inside _cm_initialiseFileUpload function.

I sow that Upload don't work with select option, but how to simulate it ?

Everything is o.k. when I put string in $this->upload_subdir.

I tried, and could not find solution.
