When I pointed you to that link I did not mean that you had to call the _cm_getForeigndata() method, I meant that you could use that code sample within your _cm_initialiseFileUpload() method.

You can access any other table from anywhere in your code with the following:

```
$dbobject =& singleton::getInstance('other_table');
$dbobject->sql_select = 'other_field';
$other_data = $dbobject->getData("other_id='whatever'");
```

What you do with the contents of $other_data is up to you.
