participante_id is a field of the record that is being inserted. It is an autoincrement and the primary key of the table, so now I see why it's null. Anyway I tried adding this code:

```
 if (is_null($fieldarray['participante_id'])){
    $part = new participante;
    $part->sql_select = 'participante_id';
    $participante_id = $part->getData("catsalut='".$fieldarray['catsalut']."'");

  }else{
   $participante_id = $fieldarray['participante_id'];
  }
```

to

```
 function _cm_post_insertRecord($fieldarray)

 {
  require_once 'classes/entidad.class.inc';
  $entidad = new entidad;
     $entidad->sql_select = 'entidad_id';
  $entidad_id = $entidad->getData("nombre='" .$_SESSION['role_id'] ."'");

        require_once 'classes/part_ent_xref.class.inc';
  $part_ent_xref = new part_ent_xref;

  if (is_null($fieldarray['participante_id'])){
    $part = new participante;
    $part->sql_select = 'participante_id';
    $participante_id = $part->getData("catsalut='".$fieldarray['catsalut']."'");

  }else{
   $participante_id = $fieldarray['participante_id'];
  }

  $insert_array['participante_id'] = $participante_id;
  $insert_array['entidad_id'] = $entidad_id[0]['entidad_id'];
  $insert_array = $part_ent_xref->insertOrUpdate($insert_array);

  if ($part_ent_xref->errors){
```

```
   $this->errors = $part_ent_xref->errors;
   return $fieldarray;
  }
  return $fieldarray;
 }
```

but I get a null value in $fieldarray['catsalut'], catsalut is a field of the record that is being added.

Your help is really apreciated.
