Hi Tony,
Thanks for the insight. I have followed the faq and got it to work (spent a good amount of time trying to figure out why it wasn't. I had forgotten to change the inner table from the calculated table name I was using before to the virtual table class opps).

It's working now, the selection is being passed down to the virtual tables child.
However on the list screen for the virutal table it is only giving me one row per page.
Any suggestions on why this would be??
