I was trying to translate my application to another language but I don't seem to do it right:

I exported the subsystem. This created a file called 'subsystem'.menu_export.txt in the text folder.

I copied the content to text/en/language_text.inc translating the titles to the right.

So now when I open the subsystem I should see all the translated labels in all the screens, right?

EDIT:I found in the tutorial that all the screen files have to be copied and translated.

So if I have to translate all the screen files, where are the 'column details for subsystem'defined in the language_text.inc file used?
