My code will not supply separate dimensions for indvidual images, so if you want everything displayed at 100x100 then they will be displayed at 100x100 - not one at 100x50, one at 100x75 and another at 75x100. If you want each image to be displayed in its correct proportions then you should ensure that each image is uploaded in the correct dimensions, i.e. 100x100.
