bonzo_bcn wrote on Thu, 17 July 2008 20:15By modifying the relationship I could retrieve only one date
Why only one date? If you set 'Parent Field' to 'CALCULATED' you can put as many field names as you like into 'Calculated Field'.
Quote:would it be possible to remove from the read records the ones that don't meet the criteria player.birthdate between category.date1 and category.date2?
Yes. Simply iterate through the $rows variable and remove the ones you don't want. This might not be a good idea though as the number of rows displayed would not be the same as the number of rows retrieved, and this could mess up your pagination. If would be *FAR* better to do all the necessary filtering in the sql SELECT statement.
