This version contains the following updates and fixes:

modified 'setColumnAttributes()' and 'std.data_field.xsl' so that the 'nodisplay' attribute can be set for fields which occur in multi-field rows for a single occurrence (eg: the 'outer' entity in a LIST2 pattern).
modified 'std.add1.inc' so that $selection will be made available as a second argument for the '_cm_initialise()' method if it is required.
modified 'icon' template within 'std.data_field.xsl' so that width and height are only output when they are non-zero.
fixed bug in 'dict_table_s02.class.inc' which failed to deal correctly with multiple candidate keys.
modified the 'actbar' template within 'std.buttons.xsl' so that the script time is not included in the HTML output if it is not included in the XML document. This can be achieved by adding the line "$GLOBALS['no_script_time'] = true;" in the subsystem's 'include.subsystem.inc' file.
upgraded TCPDF library to version 4.0.008.
modified popup processing so that _cm_popupCall() can set $this->errors and change the value in $popupname.
