The TCPDF library functions that I use to create PDF documents use default margin values which depend of the page format (A4, A5, Letter, etc). As far as I am aware it should be possible to amend these defaults by including the following code somewhere in your _cm_pre_output() method:

$this->pdf->lMargin = x; // left margin
$this->pdf->tMargin = x; // top margin
$this->pdf->rMargin = x; // right margin
$this->pdf->bMargin = x; // bottom margin

Try it and see. The only alternative would be to manually adjust the x and y coordinates as discussed in http://www.tonymarston.net/php-mysql/output-to-pdf.html#body .contents.detail3.
