Ok, more or less I got it.

Now I have problems printing the persons image in each label.

It seems as if there can only be one image per line.

If I put two images per line I get this error:

Fatal Error: Image file has no extension and no type was specified: fotos/firma (# 256).

Error in line 369 of file '/Applications/MAMP/htdocs/radicore/includes/std.pdf.class.inc'.

Script: /Radicore/ceae/fichas(output3).php

Any ideas on how to solve it?
