Subject: Dynamically generate pdf layout?

I think it isn't possible, but I want to be sure:
For example, imagine you have a competition, and this competition has rounds.
One competition can have from 1 to N rounds.
Would it be possible to generate a tabulated pdf, in which the rows would be players, the columns rounds, and each cell the score of each player in the round?
(Before generating the pdf, you wouldn't know the number of rounds of that competition)
