You haven't answered the question. I do not want to know what the sql statement is, but the result when it is run on your database. When you run that same statement through your MySQL client program (such as phpMyAdmin) what result does it display? How many rows?

It it produces only a single row then that is your problem. If it produces multiple rows then you will have to step through with your debugger to see why the outer area is not showing the scrolling hyperlinks. All the tests that I run on my code work as expected.
